

Profitbase Software-as-a-Service (SaaS) BI is an affordable alternative to the outright purchase of a BI solution. Hosted either on-premise or off-premise, the solution reduces the investment to a manageable monthly payment.

Out-of-the-Box Business Templates Speeds Deployment

Profitbase SaaS BI solutions are deployed with Profitbase Studio, a data warehouse deployment accelerator for Microsoft SQL Server, and Profitbase out-of-the-box business and data source connector templates. Data source connector templates have pre-engineered mappings to ERP and retail Point-of-Sale (POS) business systems for quick connection and data extraction enabling related data from multiple business systems to be easily consolidated.

Business templates that provide standard key performance indicators, metrics and data filtering criteria for finance, sales, inventory, purchasing, retail POS, healthcare, manufacturing and more, jump start implementations and reduce risk. Profitbase Studio enables any template to be quickly and easily modified to address any unique information requirements. The combination of Profitbase Studio and the out-of-the-box template enables BI deployment time, cost and risk to be significantly reduced.

Business Insight with 360 Degree Visibility to Performance

A Profitbase SaaS BI solution gives businesses one consolidated view of information resulting in 360 degree visibility to all aspects of business performance. The solution enables users to track and act on performance based on their role in the organization. Everyone from the CEO to the department manager can monitor performance anytime, anywhere. Using a browser and role-based self-service BI interface, empowered users are able to sort, filter and drill to detail to root out problems and solve them quickly.

Ensures Continuity of Business Insight

The solution also ensures continuity of business insight as new business systems are added through acquisition or system upgrades, protecting a company's investment in existing business systems and turning hard to access data into an asset. Businesses that deploy a Profitbase SaaS BI solution have access to better, more current information enabling them to be more agile and to make better and faster decisions.

Your SaaS BI solution includes robust dashboards, scorecard and/or reports using Profitbase InFront Analytics, and/or Microsoft SharePoint and PerformancePoint Services or your preferred dashboard, scorecard or reporting tool.

For businesses that choose to host their SaaS BI solution off-premise your solution includes all hardware and Microsoft and Profitbase software licenses that you will need. Contact Profitbase for a list of our hosting partners.

Out-of-the-Box Business Templates
